EDGE AI

3RD EDITION

*Exploring Tomorrow's AI, From
Campus to Cloud.*

An engaging magazine featuring AI stories, research,
and creativity from students, designed to inspire
learning and innovation at every edge.

September 2025

@aicluboist

01 THE DEPARTMENT & CLUB
A student-driven community fostering creativity, innovation, and collaboration through tech events and activities

05 ACHIEVEMENTS
A glimpse of student triumphs in academics, events, and innovation reflecting AIML department's spirit.

02 MEET THE TEAM
An enthusiastic team shaping AI Club's vision through leadership, teamwork, and impactful student-driven activities

06 AIML PLACEMENTS 25
Placements 2025 mark students' journey from classrooms to careers, proving talent, consistency, and determination.

03 ARTICLE SECTION
A collection of articles exploring innovations, applications, and ideas in Artificial Intelligence.

07 ARTISTS ALLEY
A creative showcase of artistic talent, featuring illustrations, designs, and imaginative works that celebrate originality and visual storytelling.

04 EVENTS GALLERY
A glimpse into AI Club's vibrant events—TEDx, coding challenges, and memorable student-driven activities.

08 THE EDITORIAL TEAM
Meet the creative minds, writers, and designers who brought this magazine to life

THE DEPARTMENT

CSE-AIML

The Department of Computer Science & Engineering offers a four-year B.Tech program in Artificial Intelligence and Machine Learning (AI & ML). This specialization prepares students to design intelligent systems by integrating machine learning with artificial intelligence. The program emphasizes problem-solving through data-driven approaches and provides in-depth knowledge of AI techniques such as neural networks, signal processing, control systems, and data mining. It equips students with advanced technical expertise to excel in modern, algorithm-driven learning systems.

Our Vision

To train universally competent and ethical Artificial Intelligence and Machine Learning professionals, equipped with innovation, leadership, adaptability, critical thinking, lifelong learning skills, global awareness, and problem-solving abilities, who are prepared to serve industry, academia, and society at large

Our Goal

Our goal is to produce high-quality engineering graduates by offering cutting-edge courses in Artificial Intelligence and Machine Learning.

The program is designed with a comprehensive curriculum aligned with RGPV guidelines, ensuring a balance between theoretical knowledge and practical, hands-on learning experiences.

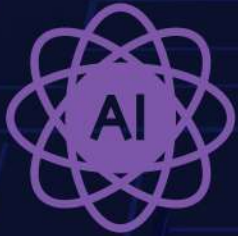

The course framework is continually updated to integrate the latest advancements in AI and ML technologies, preparing students to meet evolving industry and research demands.

Our Goal

- Deliver world-class technical education that fosters lifelong learning and equips students with expertise in advanced AI and ML technologies.
- Promote innovation and research by creating opportunities for collaboration with industry and government organizations to solve complex engineering challenges.
- Inspire professional growth by instilling strong ethical values, leadership skills, and a sense of social responsibility, enabling students to contribute meaningfully to the community
- Encourage interdisciplinary learning by integrating AI and ML with diverse fields such as healthcare, sustainability, robotics, and social sciences to address global challenges.
- Provide global exposure through exchange programs, and participation in global forums, enabling students to compete and contribute at a worldwide level.

“AI is not just about making machines smarter, it’s about making humans better.”

~ Fei-Fei Li

AI CLUB

Engage students in innovative initiatives

Description

The CSE-AIML Department proudly presents the AI Club, curated for students with a fervent interest in Artificial Intelligence (AI) and Machine Learning (ML). The main goal of this club is to offer a platform for students to enhance their enthusiasm and understanding in the realm of Artificial Intelligence. Furthermore, it aims to acquaint them with cutting-edge technologies and concepts such as AI, ML, Deep Learning, and Data Science.

The objective is not only to share knowledge but also to engage students in hands-on activities that boost participation and aid in acquiring practical skills. This approach aims to enhance students' holistic growth by nurturing their character, leadership abilities, and public speaking skills.

Activities

- Workshops that center around modern technologies
- Competitions, quizzes, and other interactive activities
- Seminars featuring expert speakers
- Practical hands-on projects
- Interactive sessions that address leadership development, communication, presentation skills, and personal growth exercises

Join us and shape the future!

SMALL LANGUAGE MODELS

Small language models are versions of natural language processing (NLP) systems that have fewer parameters and require less computational power compared to their large counterparts. In machine learning, parameters refer to the internal weights the model learns during training, which are used to make predictions or generate outputs. The size of a model is typically determined by the number of these parameters.

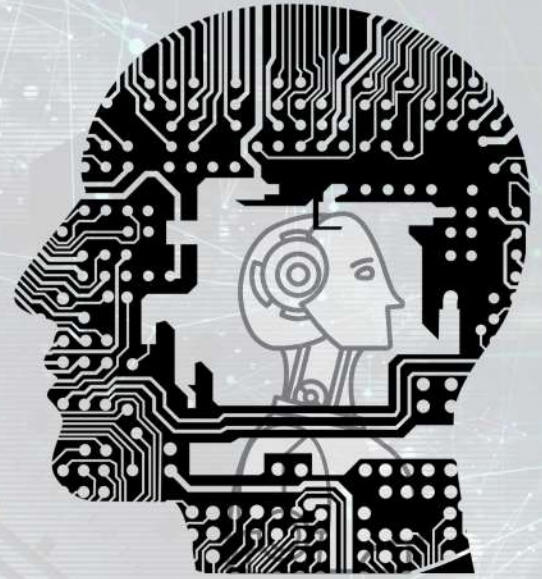

These "small language models" are reshaping the landscape of AI, offering unique advantages for specific applications without requiring massive computational resources. While large language models like GPT-3 have hundreds of billions of parameters, small language models typically range in the tens or hundreds of millions. Despite their smaller size, these models can still perform a variety of tasks, such as text generation, language translation, sentiment analysis, and more. However, they tend to do so with less accuracy or flexibility compared to their larger versions.

Recent advancements have urged the leading AI companies to increase their "distillation" techniques to create cost-effective models that retain the power of their larger counterparts. For instance, researchers from Stanford and the University of Washington demonstrated that a competitive AI model could be trained in just 26 minutes for under \$50, challenging traditional notions that large financial investments and resources are necessary for developing high-performing AI. These developments are making advanced AI more accessible, faster, and cheaper, potentially reshaping the future of AI development and deployment across various industries.

Small language models offer a range of practical applications, particularly where efficiency and resource constraints are important. These models are commonly used in embedded systems, mobile devices, and edge computing, where computational power and memory are limited. They are ideal for tasks such as text classification, sentiment analysis, and simple chatbots, where large-scale models might be overkill. The primary advantages of small language models include faster inference times, reduced energy consumption, and lower hardware requirements, making them more accessible for real-time applications and environments with limited connectivity.

Additionally, small models can be easily fine-tuned for specific domains, offering a balance between performance and resource efficiency, which is crucial for applications in remote areas, IoT devices, or smaller businesses that need affordable AI solutions.

The future of small language models is bright, with advancements in model compression techniques like pruning, quantization, and distillation making them more powerful and efficient. As demand grows for real-time AI in resource-constrained environments such as mobile devices, IoT, and edge computing, these models will become essential. They offer the advantage of improved privacy by enabling local processing, reducing the need to send data to the cloud.

With ongoing innovations in lightweight architectures and training methods, small language models will expand their capabilities, supporting diverse applications in personalized AI, healthcare, and customer service, while balancing performance, privacy and accessibility.

CATCH SOME WAVES IN

ROBO TAXI

"There is something very important about being able to know where the car is going, that the car sees what you're seeing" - Megan Neese

Autonomous vehicles are already clocking up millions of miles on public roads, but they face an uphill battle to convince people to climb in to enjoy the ride.

WHAT ARE ROBO TAXIS?

Robo taxis, also known as autonomous ride-hailing vehicles, are self-driving cars designed to transport passengers without a human driver. Powered by artificial intelligence, advanced sensors, and real-time data, these vehicles promise a safer, more efficient, and accessible way to move through our cities.

THE TECHNOLOGY BEHIND THE WHEEL

At the heart of robo taxis are AI-driven systems that process millions of data points per second. Lidar, radar, and cameras allow the vehicle to detect pedestrians, cyclists, and traffic signals, while machine learning helps it adapt to unpredictable road conditions. Combined with cloud-based updates, robo taxis are constantly improving with every ride.

BENEFITS FOR THE SOCIETY

- **Safety First:** With human error causing most accidents, robo taxis can drastically reduce crashes and save lives.
- **Eco-Friendly Travel:** Robo taxi fleets are electric, cutting emissions, lowering fuel dependency, and supporting sustainable urban transport.
- **Accessibility:** They create new possibilities for elderly, disabled, and non-driving populations to enjoy greater independence.
- **Cost Efficiency:** By reducing car ownership, parking, and fuel costs, robo taxis make commuting more affordable.
- **Traffic Reduction:** With AI-driven routing and shared rides, robo taxis reduce congestion and improve overall road efficiency.

THE FUTURE OF URBAN MOBILITY

Robo taxis aren't just about convenience—they could reshape entire cities. With fewer private cars on the road, urban planners envision less congestion, reduced parking needs, and more green spaces. The dream: smarter, safer, and cleaner cities powered by autonomous mobility.

EDGE AI 3.0

CHALLENGES ON THE ROAD AHEAD

Despite the promise, robo taxis face hurdles. Regulatory approval, cybersecurity risks, and public trust remain significant barriers. Additionally, questions about job losses in the traditional taxi and ride-hailing industries spark debate about the balance between innovation and livelihood.

GLOBAL ROLLOUT: WHO'S LEADING THE RACE?

Tech giants and automakers are investing billions in this sector. Companies like Waymo, Cruise, and Baidu are already testing robo taxis in select cities worldwide, with limited commercial operations underway in the U.S., China, Europe, and beyond, signaling a transformative global mobility shift.

Waymo, Baidu (Apollo Go), and Tesla—have launched functional autonomous taxi services, some fully driverless in parts.

2nd Year CSE-AIML

NVIDIA Unveils “Project DIGITS” at CES 2025 : AI Supercomputer which can power OpenAI’s ChatGPT-4o at your Fingertips.

At CES 2025, NVIDIA announced World’s First Personal AI Supercomputer-“Project DIGITS” by CEO Jensen Huang in Las Vegas this January 6th, priced at \$3,000(approximately Rs. 2,57,600) which will be available from May 2025, providing AI Researchers, Data Scientists, and Students worldwide with access to the power of the NVIDIA Grace Blackwell platform.

Concept of Project DIGITS :

- DIGITS is a Desktop AI Supercomputer, which is 1000 times more powerful than a standard laptop. It is culmination over a decade of research, that began as “Project DIGITS” but later evolved into the “DGX” series for enterprise AI computing.
- “The age of AI is here. Project DIGITS, with the new GB10 Superchip designed with MediaTek, makes our most powerful Grace Blackwell platform more accessible-placing it in the hands of developers, researchers, and students to solve the most pressing issues of our time.”- said CEO of NVIDIA during the launch in Convention Center, explaining DIGITS.

**“Software is eating the world,
but AI is going to eat software”**

~“CEO, Jensen Huang”

Insights related to DIGITS

DIGITS, powered by the GB10 Grace Blackwell Superchip and NVIDIA DGX OS, handles AI models with up to 200B parameters on-device and 405B when paired. It features 128 GB unified memory, 4 TB NVMe storage, and supports frameworks like TensorFlow, PyTorch, and CUDA. NVLink-C2C boosts performance for vision, NLP, and automation tasks.

Utilizing DIGITS in AI Advancemet :

- Training AI: Large models can be quickly trained, fine-tuned, and tested with one petaflop of AI power, accelerating development and reducing time to deployment.
- Cost-effective: Delivers powerful local computing with a one-time investment, cutting ongoing cloud costs—ideal for startups and research teams.
- Scalability: Easily scales by linking two units to handle larger models, suiting both small teams and enterprises.
- Streamlined Workflow: Runs on a standard power outlet and includes built-in AI tools, replacing bulky, expensive hardware with desktop-friendly supercomputing.

The Bottom Line :

NVIDIA is committed to democratizing AI, enabling more people to build, test, and innovate with advanced technologies.

As Huang said, “Everybody who uses computers today as a tool will need an AI Supercomputer.” This reflects DIGITS’ vision: making AI as accessible as laptops or smartphones—bringing the future of AI from the cloud to your desk.

3rd Year CSE-AIML

AI WEARABLES

AI wearables are intelligent, body-worn devices that harness artificial intelligence to track health metrics, offer real-time insights, and deliver personalized assistance, seamlessly integrating technology into daily life.

Solos Smart Glasses with GPT-4 Integration

Solos Technology (Hong Kong) has officially unveiled AirGo Vision™ (AirGo V), the world's first smart glasses integrated with OpenAI's GPT-4o technology. These advanced AI-powered glasses are capable of recognizing people, objects, and landmarks, providing real-time navigation guidance, and enabling hands-free photo capture as well as detailed activity summaries. Designed to seamlessly assist with everyday tasks—including cooking, shopping, home improvement, productivity, and travel—AirGo V represents a groundbreaking innovation that merges artificial intelligence with wearable technology for enhanced convenience and smarter living.

- **Everyday Assistance:** Helps with daily tasks such as cooking, shopping, home repairs, and travel, offering hands-free convenience.
- **AI Integration:** Supports multimodal AI (text + images), integrates with Google Gemini, and delivers real-time text translation.
- **Smart Features:** Equipped with built-in speakers, LED notification light, and touch controls for seamless interaction and usability.
- **Performance & Pricing:** Provides up to 10 hours of music playback on a single USB-C charge and is priced at \$249 for accessibility.

HUMANE AI PIN

Fashion and technology are often seen as separate worlds. With generative AI, users will co-create fashion items, making custom apparel, jewelry, and accessories—tailored to personal styles and preferences—the new norm.

The AI Pin is a wearable assistant combining projectors, cameras, and AI. Designed as a screenless, standalone AI device, it uses a mini-projector instead of a screen and includes a built-in camera and speaker.

WHOOOP X OPENAI

- WHOOP, in partnership with OpenAI, launched WHOOP Coach.
- Described as one of the most advanced generative AI features ever released in a wearable.
- Functions like a search engine for your body.
- Powered by GPT-4, OpenAI's most advanced generative AI system.
- Delivers highly personalized and specific recommendations and guidance.

MICROSOFT BAG

- Microsoft has filed a patent for an AI-powered smart backpack.
- Equipped with advanced hardware: camera, microphone, speaker, network interface, processor, and storage.
- Designed to assist with various daily activities through AI integration.
- Appearance and concept resemble a science fiction gadget.
- Patent outlines potential uses such as object recognition, navigation assistance, real-time information retrieval, and voice interaction.

~Garvita Dwivedi

QUANTUM AI

AI CLUB

EDGE AI 3.0

How Innovation Is Redefining the Human Experience

The future is no longer a distant concept — it's unfolding right before our eyes. From artificial intelligence and quantum computing to biotechnology and immersive digital worlds, the pace of technological advancement is not only accelerating but reshaping the fabric of our society.

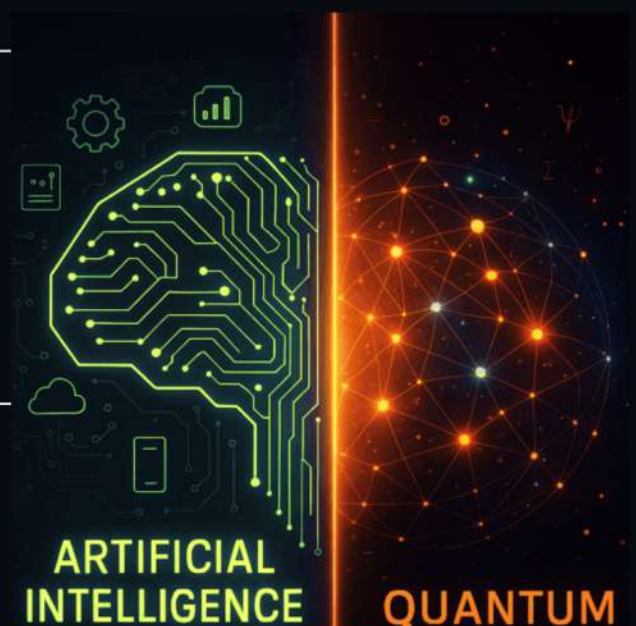

Quantum AI merges quantum computing with artificial intelligence, utilizing quantum systems' power to improve machine learning and address complex problems beyond the capabilities of traditional computing.

Quantum Computing

Quantum AI merges quantum computing with artificial intelligence, utilizing quantum systems' power to improve machine learning and address complex problems beyond the capabilities of traditional computing.

Artificial Intelligence

Artificial intelligence is a technology that simulates human cognitive functions—such as problem-solving, decision-making, and reasoning—in machines programmed to think, adapt, and learn in ways that closely resemble human intelligence.

Evolution Of Quantum AI

1982: Richard Feynman proposed quantum computers for efficient simulation of complex quantum systems.

1990: Early exploration of quantum computing in machine learning, including algorithms like QSVM.

2013: Present: Google launched the Quantum AI Lab; researchers developed frameworks such as Qiskit, Cirq, and Pennylane, and introduced Quantum Neural Networks for tasks like image recognition and NLP.

The Quantum Leap in AI

Quantum AI is a transformative convergence of quantum computing and artificial intelligence, with the potential to revolutionize numerous aspects of life.

Since its emergence in the 1990s, leading technology companies and research institutions — including Google, IBM, Microsoft, MIT, and Stanford—have actively pursued advancements in the field, developing novel algorithms and conducting cutting-edge research.

*-Vibhanshu Singh
2nd year CSE-AIML*

“AI and quantum computers complement each other.”

NEOM

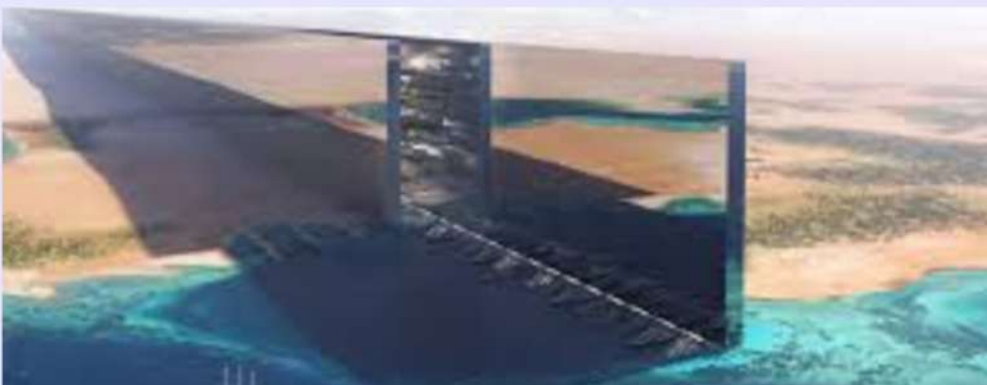

THE FUTURE OF URBAN LIVING

A cognitive city stretching across 170 kilometers, from the epic mountains of NEOM across inspirational desert valleys to the beautiful Red Sea. A mirrored architectural masterpiece towering 500 meters above sea level, but a land-saving 200 meters wide. THE LINE redefines the concept of urban development and what cities of the future will look like.

AI'S ROLE IN DEVELOPING NEOM

NEOM represents a bold vision to redefine urban living, harnessing the power of artificial intelligence (AI) to create smart cities that go beyond the limits of traditional urban planning. AI has rapidly become the foundation of NEOM's development, transforming not only the city's operations but also the everyday experiences of its residents. This deep integration of AI into NEOM's framework led to a landmark agreement with STC in July 2020, establishing the infrastructure for one of the world's foremost cognitive cities

No roads, cars or emissions, it will run on 100% renewable energy and 95% of land will be preserved for nature. People's health and wellbeing will be prioritized over transportation and infrastructure, unlike traditional cities.

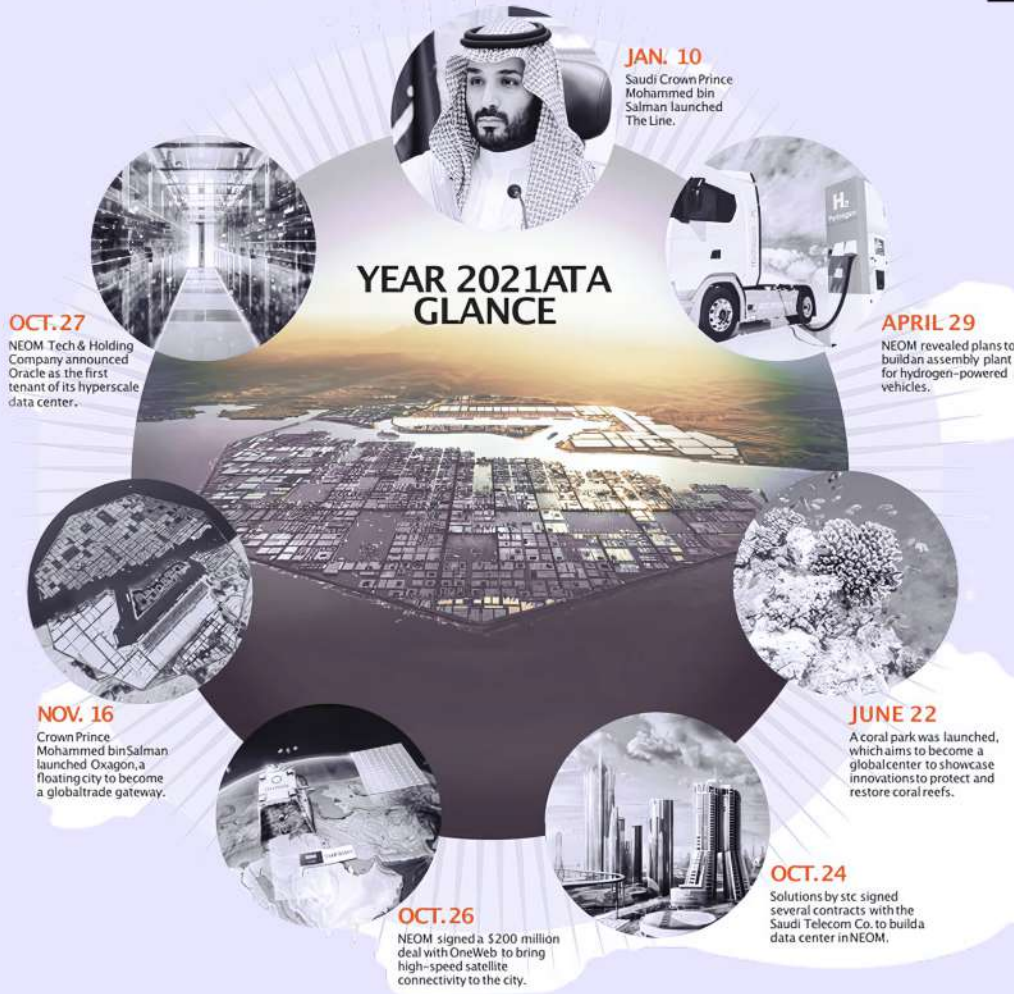

AI FEATURES

- DIGITAL TWINS
- SMART ENERGY
- 5G INFRASTRUCTURE
- AUTONOMOUS MOBILITY
- PERSONALIZATION
- SUSTAINABILITY
- AI HEALTHCARE
- SMART EDUCATION
- IMMERSIVE ENTERTAINMENT
- PREDICTIVE MAINTENANCE

THE LINE

THE LINE will eventually accommodate 9 million people and will be built on a footprint of just 34 square kilometers. This will mean a reduced infrastructure footprint, creating never-before-seen efficiencies in city functions. The ideal climate all-year-round will ensure that residents can enjoy the surrounding nature. Residents will also have access to all daily essentials within a five-minute walk, in addition to high-speed rail – with an end-to-end transit of 20 minutes.

THE LINE will tackle the challenges facing humanity in urban life today and will shine a light on alternative ways to live. We cannot ignore the livability and environmental crises facing our world's cities, and NEOM is at the forefront of delivering new and imaginative solutions to address these issues. NEOM is leading a team of the brightest minds in architecture, engineering and construction to make the idea of building upwards a reality

"The Line is not just about compact urban living; it's about redefining city life to prioritize human well-being over congestion."

Unparalleled Access to Nature

Seamlessly blending urban living with pristine landscapes, NEOM ensures unmatched access to nature, where mountains, beaches, and deserts exist in harmony with modern life

CLEAN AIR FOR EVERYONE

NEOM is designed to guarantee clean, breathable air for all, powered by renewable energy and sustainable urban systems that prioritize human health and well-being.

MORE TIME TO SPEND WITH LOVED ONES

With AI-driven mobility and smart infrastructure, NEOM minimizes travel and maximizes convenience, giving residents more quality time to share with their loved ones

A PERFECT CLIMATE ALL YEAR AROUND

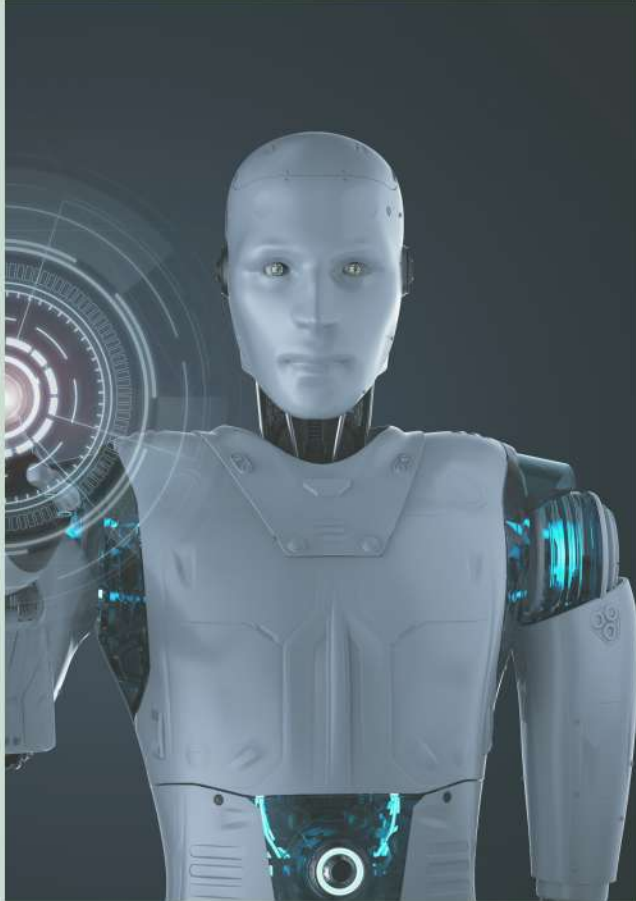

NEOM is engineered to offer a balanced, comfortable climate throughout the year, ensuring sustainable living in harmony with nature and human well-being

~Riju Jain
3rd Year CSE-AIML

PM Modi at AI Summit 2025 : Shaping India's AI vision for the Future

2025 AI SUMMIT

How Innovation Is Redefining the Human Experience

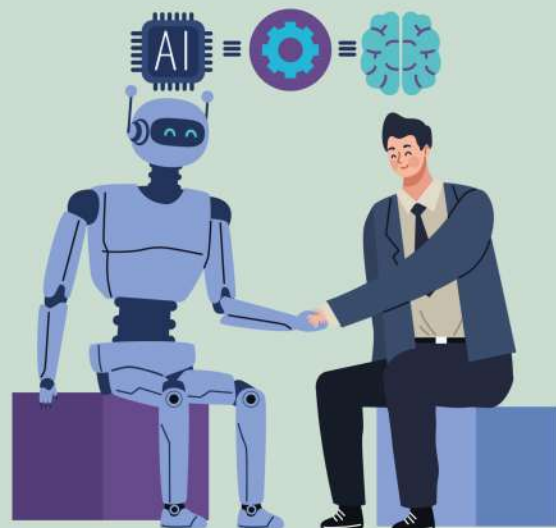

The 2025 AI Action Summit in Paris, France, followed earlier events: the 2023 AI Safety Summit at Bletchley Park, UK, and the 2024 AI Seoul Summit in South Korea.

- Two-Day AI Summit (10–11 February)
- Aimed to:
 - Provide safe, reliable, and independent AI access to a wide range of users.
 - Promote environment-friendly AI development.
 - Ensure effective and inclusive global AI governance.

India's AI Outlook

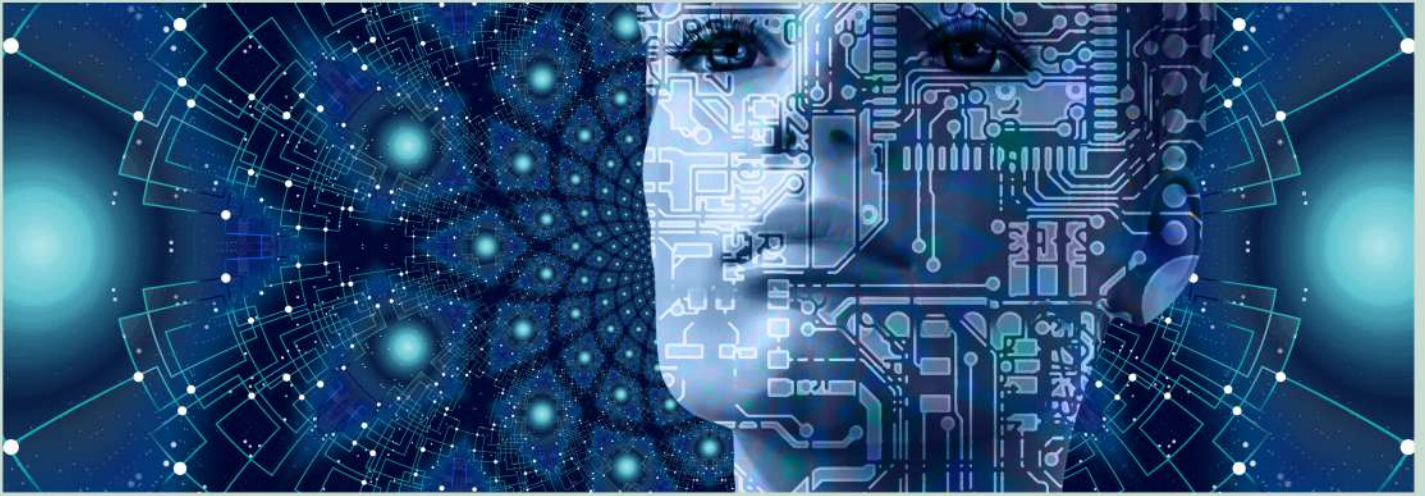

- At the Grand Palais Museum, PM Modi stated that AI is reshaping the economy, security, and society, calling it “the code for humanity”.
- Highlighted AI's unprecedented speed and scale in development and deployment.
- Called this “the dawn of the AI age”, urging collective global efforts for a framework that upholds shared values, addresses risks, builds trust, and ensures access for all — especially the Global South.

- PM Modi co-chaired the 2025 AI Action Summit with French President Emmanuel Macron.
- The two-day summit focused on three main objectives and five key work tracks for 2025.
- Over 1,000 participants from 100+ countries attended, including Sundar Pichai (Google CEO), Justin Trudeau (Canadian PM), and J.D. Vance (US Vice-President)

LIVE THE CHANGE

TECHNOLOGY THAT MOVES YOU FORWARD

FUELING PROGRESS THROUGH DIGITAL POWER.

India's AI Progress

- PM Modi's participation underscored India's growing leadership in AI and its commitment to responsible innovation.
- Stated that India leads in AI adoption and techno-legal solutions on data privacy, citing the Digital Personal Data Protection Act, 2025.
- Highlighted that India is developing AI for public good, has one of the world's largest AI talent pools, and is building its own Large Language Model to reflect the country's diversity.

THE SPARK BEHIND EVERY BREAK THROUGH.

- At AI Summit 2025, innovation thrives where bold ideas meet intelligent technology. Each breakthrough is powered by curiosity, collaboration, and the drive to reshape industries, proving that the true spark lies in human creativity amplified by AI, inspiring future possibilities globally.
- AI Summit 2025 showcases transformative solutions, uniting visionaries to shape a smarter future.

ARTIFICIAL INTELLIGENCE AND HUMANS

A SYMBIOTIC FUTURE

Artificial intelligence (AI) systems require tasks that demand high human intelligence — such as decision-making, problem-solving, and deep learning. These systems can analyze data faster and more efficiently than humans, enabling breakthroughs across various industries including healthcare, finance, and education.

Conclusion

- PM Modi's address outlined AI's roadmap, the need for investment, and its role in promoting sustainable, equitable development.
- Reaffirmed India's commitment to achieving the summit's five key themes for 2025: Innovation and Culture, Future of Work, Trusted AI, Public Interest AI, and Global Governance of AI.
- The announcement to host the next AI Summit positions India for an ambitious leap toward becoming a global AI powerhouse.

~Aadi Jain
2nd Year CSE-AIML

India's Contribution

India emerged as a key voice for inclusive, ethical, and sustainable AI at the 2025 AI Action Summit. PM Modi's interventions highlighted the country's strengths in digital public infrastructure, large AI talent pool, and commitment to public-good applications. By addressing AI bias, advocating open-source solutions, and announcing the development of an indigenous Large Language Model, India positioned itself as both a leader in innovation and a champion of equitable access, especially for the Global South. The offer to host the next summit further cemented India's role as a driving force in shaping global AI governance.

THE FUTURE OF DIGITAL CONNECTION METAVERSE

INTRODUCTION TO METAVERSE

The word Metaverse is made from prefix “Meta”- meaning ‘Beyond’ and stem “Verse”- a backformation from ‘Universe’ . This term describes an evolving concept that envisions a virtual realm where people can connect, interact, and explore in a digital universe in 3D. Using technologies like Virtual Reality, Augmented Reality, and Smart Glasses. In simple terms, the metaverse is the next stage of the internet where we will be able to interact in a physical space using avatar’s in 3D. This is a part of Web 3.0, which is already emerging.

IDEA OF METAVERSE

The concept of metaverse originated from “Snow Crash”, a sci-fi novel by Neal Stephenson in 1992 .With Mark Zuckerberg rebranding his company’s name to Meta formerly known as Facebook to outline his vision for metaverse plan to create a new 3D virtual world. During the company’s Annual Connect Conference on October 28, 2021 he showed a video demonstrating metaverse and wrote a founder’s letter about the metaverse, which can be found on Meta’s website.

PROGRESS OF METAVERSE

- AI Integration – AI-powered avatars, generative environments & realistic NPCs enhance user experience.
- MR over VR – Shift towards Mixed Reality (MR) combining physical & digital worlds.
- Decentralization – Blockchain enables user-owned, decentralized virtual worlds instead of centralized control.
- Gaming & Entertainment – Gaming drives metaverse growth with platforms (Fortnite, Roblox, Decentraland) using blockchain, NFTs & AI content.

THE DIGITAL WORLD

THE ORIGIN OF THE METAVERSE

- **Literary Origin** – The term Metaverse was coined by Neal Stephenson in *Snow Crash* (1992), depicting a shared virtual world with avatars. It later gained cultural momentum through *Ready Player One*.
- **Technological Foundations** – From ARPANET, *Maze War*, and MUDs (1970s–80s) to *Active Worlds* (1995) and *Second Life* (2003), early platforms pioneered persistent online spaces and user-driven worlds.
- **Gaming as the Core** – MMORPGs like *World of Warcraft* established lasting digital identities, economies, and social interactions, shaping the Metaverse's foundation.
- **Rise of VR & AR** – Oculus Rift (2012) brought VR to the mainstream, while *Pokémon GO* (2016) demonstrated AR's ability to merge digital and physical realms.
- **Mainstream Adoption** – Facebook's 2021 rebrand as Meta positioned the Metaverse as the internet's next evolution, merging VR, AR, AI, and blockchain.

PITFALLS & DRAWBACKS

Privacy & Security – Risks of data misuse and identity theft.

Digital Divide – Accessibility issues across socioeconomic groups and regions.

Health Issues – Addiction, eye strain, mental health problems, physical strain.

Interoperability – Lack of unified standards between platforms.

Ethical Concerns – Identity manipulation, misinformation, fake realities, exploitation.

CONCLUSION

The Metaverse marks a transformative leap in digital connectivity, uniting physical and virtual realms into immersive experiences. Though still emerging, rapid advances in AI, mixed reality, blockchain, and gaming are shaping its growth. In the coming decade, it could redefine how we work, play, learn, and connect. With tech giants investing despite challenges like hardware, interoperability, and regulation, the Metaverse stands poised to become the next evolution of the internet—a universe beyond boundaries.

~Anshika Singh
2nd year CSE-AIML

GPT-5: A Paradigm Shift in Artificial Intelligence

EDGE AI 3.0

A Leap Beyond Language

Artificial intelligence has reached a new milestone with the release of GPT-5, OpenAI's most advanced generative model to date. While previous versions transformed industries with human-like text generation, GPT-5 represents a leap into true multimodal intelligence—a system that can seamlessly understand and generate text, code, images, audio, and more. For professionals in the AI space, GPT-5 is not just another upgrade—it's a paradigm shift in how humans and machines interact.

Core Advancements

Multimodal Mastery

GPT-5 seamlessly works across text, images, and data—an engineer can upload a diagram, get an optimized version, and receive clear documentation.

Collaboration, Not Just Automation

More than output generation, GPT-5 acts like a teammate—suggesting, questioning, and refining ideas alongside professionals.

Deeper Reasoning & Memory

With longer context and improved memory, GPT-5 handles complex, ongoing conversations and workflows in fields like law, medicine, and finance.

Customizability

Offers more personalized responses, adaptable to specific professional domains and needs.

A Leap Beyond Language

- Healthcare → "Smarter Diagnoses, Seamless Care"
- Finance → "From Data to Decision-Making"
- Education → "Personalized and Immersive Learning"
- Research → "Accelerating Discovery at Scale"
- Manufacturing & Industry → "Intelligence on the Assembly Line"
- Legal & Governance → "From Case Law to Clear Guidance"
- Creative Industries → "Art, Design, and AI Synergy"

Ethical and Practical Challenges

- Bias & Hallucination Risks – GPT-5 may unintentionally generate biased or inaccurate outputs
- Data Governance – Secure handling of sensitive data is critical to avoid misuse, leaks, or ethical violations across professional domains.
- Explainability & Transparency – The model often operates like a “black box.” In high-stakes fields such as healthcare, law, and finance, professionals need clearer insights into how outputs are generated.
- Human Dependency – Over-reliance on GPT-5 can weaken domain expertise and critical thinking.
- Balancing Innovation & Responsibility – GPT-5 delivers powerful opportunities, but safe adoption requires careful regulation.

5 Pillars of AI Ethics

What Professionals Should Do Now

- Experiment Early – Integrate GPT-5 into your workflows to understand its capabilities and limits.
- Stay Critical – Treat its outputs as informed suggestions, not unquestionable truths.
- Prioritize Ethics – Develop governance structures around data privacy, accountability, and fairness.
- Upskill Continuously – Professionals who pair domain expertise with AI fluency will lead the next wave of innovation.

The Road Ahead

GPT-5 is not the final destination but a turning point in AI development. The shift from “tool” to “collaborator” signifies a future where AI systems work shoulder to shoulder with professionals—enhancing creativity, reducing cognitive load, and accelerating discovery. For AI professionals, the message is clear: embrace, adapt, and lead. GPT-5 is not here to replace expertise—it’s here to amplify it.

-Ankush Kumar
3rd Year CSE-AIML

“GPT-5 is not just a tool—it’s the beginning of true collaboration between human intelligence and artificial intelligence.”

Sam Altman

THE INSIGHTS

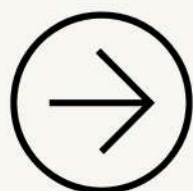

HOW AI IS CHANGING THE ECOMMERCE SCENARIO

Artificial Intelligence (AI) is revolutionizing eCommerce by making shopping smarter and more personalized. From analyzing customer behavior to predicting what they might buy next, AI ensures a seamless experience for every shopper. Features like voice and visual search make it easier to find products in seconds.

Personalization is the biggest game-changer. AI-powered recommendation systems suggest products based on browsing history and interests, making customers feel understood and valued. This leads to better engagement and higher sales for businesses.

AI is also transforming the backend of eCommerce. Dynamic pricing adjusts costs in real-time, inventory management becomes automated, and chatbots handle queries 24/7, improving efficiency and reducing human effort.

The future of online shopping is AI-driven—smart, secure, and customer-focused. Brands that adopt AI today will lead the digital marketplace tomorrow. Are you ready for the change?

KNOW WHAT YOUR CUSTOMERS WANT MOST AND WHAT YOUR COMPANY DOES BEST. FOCUS ON WHERE THOSE TWO MEET.

15 ECOMMERCE AI BUSINESS TIPS THAT WILL ACTUALLY MAKE YOUR LIFE BETTER.

Running an eCommerce business can be challenging, but the right strategies can make all the difference! From optimizing your website for speed and mobile users to leveraging social media marketing, personalized email campaigns, and AI-driven product recommendations, every step counts. Focus on high-quality product images, clear descriptions, and easy navigation to improve user experience. Offer multiple payment options, implement secure checkout, and use data analytics to track customer behavior.

SCHEDULE

To start an eCommerce business, choose a profitable niche, register your brand, and set up your online store on platforms like Shopify or WooCommerce. Source products, add quality images, and enable secure payment and shipping options. Finally, launch with strong marketing on social media and ads to attract customers and grow your sales.

BUILD

Start by picking a profitable niche and setting up your online store on Shopify, WooCommerce, or similar platforms. Add high-quality product photos, clear descriptions, and secure payment options. Plan your shipping, then market through social media, ads, and email campaigns. Launch with attractive offers to grab attention and keep optimizing for growth!

CUSTOMERS

Customers are the heart of business, attract them, focus on providing value through quality products, competitive pricing, and a smooth shopping experience. Personalize recommendations, offer multiple payment options, and provide fast, reliable delivery. Great customer service builds trust, turning one-time buyers into loyal customers who keep coming back.

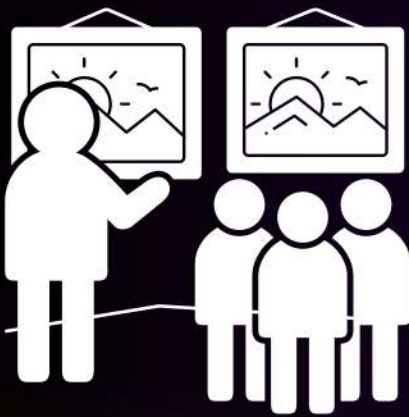

eCommerce is all about creating value and building trust. With the right strategy, great products, and a customer-first approach, your online business can grow beyond limits. Start small, stay consistent, and let technology like AI and smart marketing do the magic. The future of shopping is digital—make sure your brand is a part of it!

YASHPAL SINGH

HR LEADER CONNECTOR

Following the session, Yashpal Singh, a seasoned HR professional with 18 years of expertise, shared insights from leading talent acquisition across Asia Pacific. His experience and engaging presence inspired students through global perspectives on careers, leadership, and growth.

RITWIK JOSHI

AI AND ROBOTICS EXPERT ENTREPRENEUR

Ritwik Joshi, co-founder of Ability Advocacy and known as ChatBotWala, guides startups in AI, RPA, and chatbots. As GENIE AI's APAC President and TestnTrack's CTO advisor, his talks at IBM, IEEE, and TEDx inspire innovation.

VAIBHAV GUPTA

WINNER INDIAN IDOL 14

Vaibhav Gupta, the sensational winner of Indian Idol 14, captivated audiences with his versatile voice and genre-blending performances. His journey reflects creativity, passion, and perseverance, inspiring millions across India with hard work and remarkable talent.

MUKESH JAIN

LEADER INNOVATOR

Mukesh Jain, CTO, Executive VP, and Global Head for People Analytics at Capgemini, shared insights from his 29 years of leadership across Microsoft, Jio, and more, inspiring students with lessons on innovation, growth, and career guidance.

**COLONEL SHIVENDER
KANWAR**

EX-SPECIAL FORCES LEADERSHIP TRAINER

Colonel Shivender Kanwar, a decorated Para SF Commander with over two decades of service, shared his journey of leading elite counter-terrorism units, founding Team Global, and inspiring students with lessons of leadership, courage, and national security excellence.

ARSH GOYAL

EDUCATOR YOUTUBER DEVELOPER

Arsh Goyal, a renowned software engineer with experience at ISRO and Bitgrit, shared insights from high-stakes projects and global tech leadership. His inspiring talk motivated students, highlighting his journey of teaching 50,000 learners and delivering 100+ impactful sessions.

NISHANT TANVAR

STAND-UP COMEDIAN YOUTUBER

Nishant Tanwar, popularly known as Rider OP, captivated students with his wit and experiences. With trending stand-up videos, global performances, and acclaimed Amazon specials, his engaging delivery inspired audiences to appreciate comedy's power in connecting people worldwide.

The TEDx event, organized by the AI Club, inspired attendees with transformative ideas and diverse perspectives. It marked a milestone for Oriental Group of Institutes, motivating students to pursue aspirations confidently and create lasting impact.

Canva Workshop

Our department's AI Club under AIML OIST recently organized a highly successful and engaging two-day workshop on Advanced Canva and Basic Figma for enthusiastic 1st- and 2nd-year students on 13th and 14th May, providing them with creative skills, hands-on learning, and valuable design insights to boost their academic and professional journey

Canva: The Ultimate Design Tool for College Students

In the dynamic world of academic and professional pursuits, college students are constantly seeking innovative tools to enhance their academic and personal branding.

Canva

The Student's Design Companion: Why Canva Matters

Imagine having a design studio in your pocket, accessible 24/7, with no prior design experience required. That's exactly what Canva offers to college students – a powerful, user-friendly design tool that levels the playing field for creative expression.

Workshop Highlights

- 🎨 2 Days of Creative Learning
- 👤 60+ Participants
- 💡 Hands-On Projects in Canva & Figma
- 🤝 Interactive Group Activities & Teamwork
- 🗣️ Guidance from Experienced Mentors
- 🚀 Boost in Creative Confidence & Skills
- 📈 Improved Academic & Professional Readiness

Figma: The Student's Gateway to Real-Time Design and Innovation."

In the dynamic world of academic and professional pursuits, college students are constantly seeking collaborative platforms to showcase creativity and teamwork

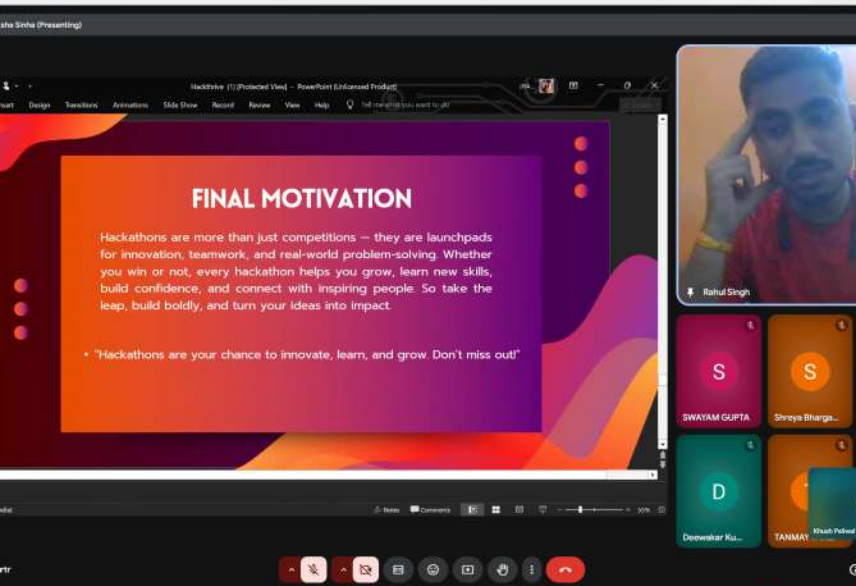

The Student's Design Companion: Why Figma Matters

Imagine collaborating on a single canvas in real time, from anywhere, with no complicated setup required. That's exactly what Figma offers to college students – a modern, cloud-based, and highly collaborative design tool that transforms teamwork into creativity, enhances technical learning, and prepares them for real-world professional design challenges

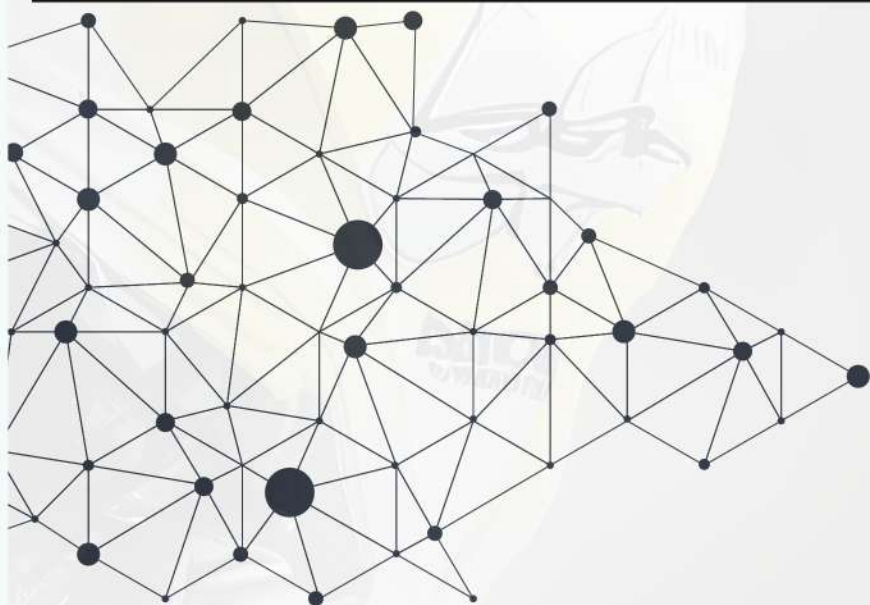

CODING, COLLABORATION, AND CREATIVITY AT HACKTHRIVE 2025

A LOOK AT HACK THRIVE 2025

HackThrive 2025, presented by the AI Club of Oriental Institute of Science and Technology, was more than just a coding workshop—it was a movement of ideas, energy, and innovation. Students from diverse backgrounds came together on a common platform, driven by curiosity and the passion to solve real-world problems through technology. The event became a true celebration of collaboration, creativity, and the limitless potential of young minds.

What made HackThrive stand out was not just the focus on technical excellence but also the spirit of mentorship and teamwork. Participants engaged in hands-on sessions, guided by experienced mentors who shared insights on coding, problem-solving, and future trends in technology. The vibrant discussions, exchange of ideas, and willingness to learn turned the workshop into a memorable journey of growth and discovery.

CYPHER 30

1 APRIL-1 MAY 2025

30 Days Of Coding Challenge

Team Behind the Event

Team AI Club

Cypher 30, a 30-day coding challenge at OIST, boosted daily practice, logic, and consistency while fostering peer learning and problem-solving

The third edition of Cypher 30 wrapped up successfully with great energy and participation.

We extend heartfelt congratulations to the winners for their performance. Equal appreciation goes to the finalists and all participants, whose dedication, talent, and spirited efforts made the competition truly memorable and inspiring for everyone.

NSS CADETS TO THE RESCUE!

The National Service Scheme (NSS) unit of the Artificial Intelligence & Machine Learning (AIML) Department, OIST Bhopal, has always believed in the motto "Not Me, But You." With this spirit, our volunteers actively contribute to society while shaping themselves as responsible citizens

AIML Department's Role:

The AIML Department not only engages in social service but also integrates technology with social good

Through these efforts, the NSS wing of AIML Department continues to prove that true education lies not just in mastering technology, but in using it for the betterment of society

The background is a light blue-grey color. It is decorated with several large, expressive splashes of orange and dark blue paint. A large, semi-transparent yellow circle is positioned behind the text. The word 'Artistic' is written in a dark blue, cursive script with a slight drop shadow. The word 'Alley' is written in an orange, cursive script, also with a slight drop shadow.
